ANALYSES:

Calcium Scoring
    Agatston score and
    percentile using non-
    contrast scans
**Segmentation of the four
main coronary arteries**
    LM, LAD, LCx, RCA
    as well as their sub-branches
Planar reformations of each vessel
    Stretched or straightened curve
Double Oblique Stacks
    Reformatted along the AV groove
    and IVS to visualize main vessel beds
Measurement of stenosis
    With proximal and distal references
    and SCCT severity grading for each lesion
Summary reporting
    Using the SCCT axial coronary
    segmentation model

ABOUT PRECISION IMAGE ANALYSIS (PIA):

Precision Image Analysis is a world class provider of cloud-based, advanced medical 3D image post-processing and data analysis. PIA serves the global healthcare and research communities through remote image post-processing analysis and reporting services.

The company's solutions offer an excellent opportunity to avoid software and hardware capital expenditures while incorporating advanced image quantification at reduced cost and increased quality with exceptional standardization, reproducibility and turnaround times.

For more information, contact PIA at (425) 822-8199,
